

How to access health data in Luxembourg before 2029?

The European Health Data Space (EHDS) rules on re-use of health data will apply from **26 March 2029**.

However, re-users do not need to wait until 2029 to re-use health data in Luxembourg. Indeed, the Luxembourg Data Factory already provides a single-entry point through which re-users can discover, request access and securely process health data **provided that the latter are held by Luxembourgish public sector bodies**.

Re-using health data in Luxembourg today and in 2029

	What is currently accessible through LETZDATA	What will be available through EHDS
Type of data	Personal data, confidential data, data protected by intellectual property rights	Personal and non-personal electronic health data (e.g., electronic health records, medical device outputs, mortality registers)
Eligible data holders	Public sector bodies (for example, ministries, public administrations, municipalities)	Public and private entities active in the healthcare or care sectors, incl. public administrations, social security bodies, care providers, researchers, developers of health products and services
Authorised re-use purposes	Statistical analysis, teaching/education, scientific research, historical research, and public policy evaluation	Official statistics, teaching/education, scientific research, innovation, public health, policymaking, improvement of healthcare and treatment
Approval body for re-use	Government Commission for Data Sovereignty (CGSD) Luxembourg Data Authority Commissariat du Gouvernement à la souveraineté des données	

A common pathway to data access and re-use

From LETZDATA today to the EHDS in the future, re-users follow the same core steps to access data pseudonymised or anonymised individual-level data:
